

Montanaro UK Income (Offshore) and (Onshore)

UK All Companies

Introduction

Onshore and Offshore (Dublin based) versions of the strategy available

Montanaro UK Income invests in smaller company quality growth stocks. It does not invest in AIM, micro-cap and unquoted stocks. It is a mainstream UK smaller companies equity income fund managed in a conservative way with a distinctly low turnover and it has ESG/SRI aspect which is integral to the investment process.

Why RSMR Rate this Fund

- Montanaro has the largest and one of the most stable small-cap teams in the UK, although it is not well recognised in the retail market
- The exclusion of AIM, micro-cap and unquoted stocks differentiates the fund from its closest peers
- The fund has substantially outperformed its benchmark and closest peers since launch

Fund Process

The process begins with the investment universe of around 6,000 stocks being filtered down to around 300 companies that are suitable for a UK income fund. Montanaro use a proprietary screen which looks at profitability, growth, leverage, cash and volatility. The screen provides information about stock liquidity, valuation and momentum.

Meeting company management and regular site visits form a crucial part of the decision-making process, and as part of the due diligence, analysts take references from industry contacts, suppliers and customers. Having identified a potential investment, the analyst then completes a quantitative checklist and scores the company on a wide range of criteria and the aggregate score is designed to reflect the quality of the business and its management. Analysts also have to complete a corporate governance checklist and an environmental and social checklist. Discounted cash flow models are produced and the sustainability of dividends is assessed, as is the potential for dividend growth. Target prices are set and the analyst then presents their findings to the Montanaro investment committee who challenge any recommendations.

All of the research is carried out in-house. In terms of portfolio construction, target weightings vary from 1% to 3.5% and the manager will top-slice at 5%. The sell discipline is triggered when a price target is met, when the holding goes over 5%, in the event of a takeover, or where the dividend yield falls below 1.5%.

Evaluation

This fund is a differentiated offering, drawing on the expertise of the largest smaller companies team in the UK. It is a conservatively managed UK income fund which in the longer term should provide investors with attractive returns.

Application

This fund can be used to diversify any UK equity income portfolio or to provide a more defensive exposure to UK smaller companies.

Our Opinion

Established in 1991, Montanaro are not well known in the retail market and so the fund has plenty of capacity, which is an issue facing many UK retail smaller companies funds. We believe that this is an extremely attractive offering for investors seeking a healthy and sustainable level of equity income and/or exposure to smaller companies.
